

Dear Admissions Committee,

I am pleased to strongly recommend **Elsabeth Kahsay Tesfay** to the OIST research internship position in the field of Informatics and or Artificial Intelligence. As his teacher for several courses at Addis Ababa Science and Technology University, I have witnessed firsthand her stellar academic abilities and drive to use technology to serve communities.

In my Mobile computing course, she gave an outstanding presentation on the internet of things. She demonstrated an impressive understanding of the concepts using smart agriculture. Her eloquent ability to communicate this highly technical information and answer any questions reflected both her grasp of the material and her skill in adapting this knowledge to an audience.

Similarly impressive were his analytical abilities in applying academic concepts to real-world solutions. For her senior project developing a labor resource management system, I connected her with resources and professional contacts. Though not formally her advisor, I was impressed by her eagerness to learn and determination to create technologies benefiting communities.

Elsabeth's academic record also supports my recommendation. She earned top grades in my challenging courses. Additionally, she was recognized for academic excellence in her junior year, exemplifying her consistent diligence and aptitude.

In summary, I give my strongest recommendation for Elsabeth's admission to OIST research internship position in the field of Informatics and or Artificial Intelligence program. Her academic excellence, communication abilities, resourcefulness, and passion for impacting communities through technology make her a promising candidate to contribute to innovative research.

Please feel free to contact me if you have any other questions.

Sincerely,

Mr. Muleta Taye Tujuba,

Lecturer, AASTU
